BEST AVAILABLE IMAGES

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

Amendments to the Abstract:

ABSTRACT

A semiconductor device ~~comprises~~ includes a module board having a top surface and a backside surface, a lower chip having a first circuit operated by ~~at~~ a first frequency and a second circuit operated by ~~at~~ a second frequency, an upper chip disposed so as to overlie ~~over~~ the lower chip, ~~and~~ having ~~the~~ a first circuit and ~~the~~ a second circuit, a plurality of wires electrically bonding the upper chip to the module board, and electrically bonding the lower chip to the module board, respectively, and a plurality of chip components on the module board, ~~and the.~~ The first circuit of the upper chip is disposed opposite to the second circuits of the lower chip, while the second circuit of the upper chip is disposed opposite to the first circuits of the lower chip. As a result, interference by high frequencies ~~is rendered~~ ~~hard to will~~ hardly occur between the wires bonded to the upper and lower chips, respectively, ~~at a time when those circuits having respective frequencies are in operation, thereby enabling reliability of the semiconductor device to be enhanced.~~
